

# Global Trading Infrastructure

---

A trading environment professionals trust, seen through your client's eyes.

# 10 Years. Global Reach. Real Infrastructure.

## WHO WE ARE

OnFin has operated since 2015. Over that time it has grown from a focused execution venue into a full trading business, serving thousands of traders across Asia, Europe, the Middle East, and now Latin America. For a partner, that history matters. The platform a client signs up to today rests on infrastructure that has been running, and improving, for a decade.

The numbers describe the scope. Clients trade more than 800 instruments from a single account, and use the cabinet and platforms in ten languages. Behind that sits the company's own technology. The MT4 and MT5 terminals the industry already knows connect to a proprietary client cabinet that handles funding, reporting, and account management in one place.

Two things anchor everything that follows. Orders run on an ECN, no-dealing-desk model, with liquidity aggregated from outside providers. And the business is built around partners, with a three-level introducing-broker network wired into how the company grows. A client is not joining a startup. They are joining an established broker that treats the people who introduce them as part of the model.

# A Decade of Consistent Growth

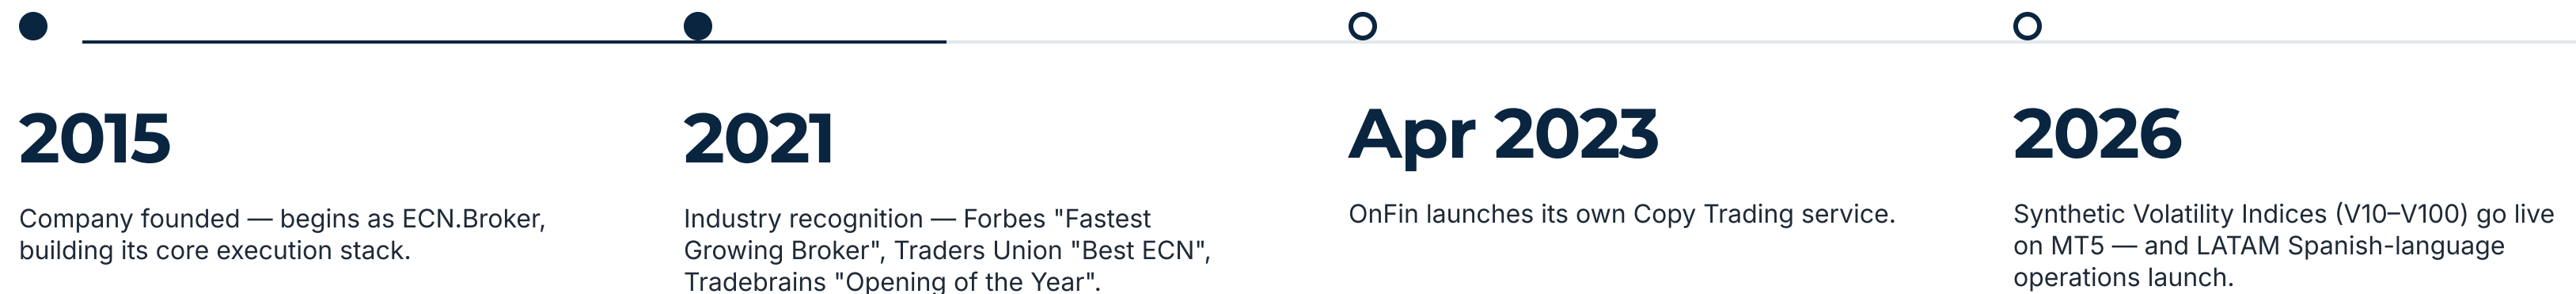

Four moments we can stand behind.

Steady, documented growth is one of the easiest ways to build a partner's confidence, and one of the easiest to overstate. This timeline keeps to moments that can be verified rather than filling a decade with invented milestones.

OnFin was founded in 2015 and spent its early years building the execution stack that still runs the business. By 2021 that work was drawing outside recognition, including Forbes naming it among the fastest-growing brokers and Traders Union rating it a leading ECN broker. In April 2023 the company launched its own copy-

trading service, opening the platform to investors who preferred to follow professionals rather than trade themselves.

2026 is the year that matters most for this audience. OnFin brought its synthetic Volatility Indices live on MT5, adding a product line that trades around the clock, and opened Spanish-language operations as it moved into Latin America. For a partner in the region that last point is the headline. The company is not testing the water. It is staffing, translating, and building payment and support coverage for the market the partner already works in.

# Built on Institutional-Grade Security

Your clients' capital, protected at every step.

Most clients decide whether they trust a broker before they look at spreads or leverage. They want to know their money is safe, and a partner needs a clear answer. OnFin is built so that answer is an honest one.

Client funds are kept in segregated bank accounts, held apart from the money the company uses to run its business. Deposits are never spent on operations, every balance is recorded on its own, and withdrawals are paid from the segregated pool. If the company ever ran into trouble, client money would sit outside it.

Execution follows the same principle. On forex and CFD trades OnFin does not take the other side of a client's position. Orders go to the market, prices come from the market, and there are no requotes, so the firm earns from spreads and commission rather than from a client's losses. OnFin operates under license number BFX2024038 from the Mwali International Services Authority in the Union of Comoros. It is an offshore license, and the company says so plainly. Being straight about it is part of earning the trust.

## Segregated Client Funds

Client money is held in separate bank accounts, isolated from company operations — never used to finance the broker.

CLIENT FUNDS POOL

# From Broker to Financial Ecosystem

“We build the environment where traders grow and partners scale.”

For a partner, the difference between a broker and an ecosystem is retention. A client who only finds somewhere to place trades will leave for the next promotion. A client who finds tools, copy trading, fast payments, and support in their own language tends to stay, and a client who stays is what pays a partner over time.

That thinking sits behind the four principles below. Technology comes first, the platform is global by default, every feature is built around how traders actually work, and the model favors long-term retention over quick acquisition.

- Technology First
- Global by Default
- Trader-Centric
- Sustainable Model

# Where Your Clients Are, We're Already There

OnFin did not arrive in Latin America from nowhere. The company already runs across Southeast Asia, parts of Europe, Turkey, and a growing footprint in Africa, so the operational work of supporting traders in many countries and currencies is something it does every day. A partner is plugging into a machine that already runs, not asking a broker to build one from scratch.

Latin America is the current priority. Through 2026 OnFin is putting Spanish-language operations, local payment methods, and regional introducing-broker partnerships behind the markets of Mexico, Colombia, Peru, Chile, and Argentina. The aim is simple. A client in the region should find the same quality of platform, funding, and support that a client in a core market already gets.

|                            |  |
|----------------------------|--|
| <b>Asia</b><br>CORE MARKET | Indonesia · Thailand · Malaysia · Vietnam · Myanmar · Philippines · Laos · Nepal · India |
| <b>Europe</b>              | England · Spain · Portugal · Armenia   |

# Trade on the World's Most Trusted Platforms

Clients do not want to learn a new platform to trade with a new broker. OnFin removes that friction by running the two terminals almost everyone in this market already knows, MetaTrader 4 and MetaTrader 5, on desktop, web, and mobile.

MT4 is the classic choice for forex-focused traders. It is simple, fast, and supports automated trading through Expert Advisors. MT5 is the multi-asset upgrade, carrying everything on MT4 and adding stocks, crypto, and the synthetic indices, with more tools and higher leverage. Both connect to the OnFin cabinet, so funding happens without leaving the platform and one login covers several accounts.

**MT4 – Desktop terminal**  
Live screenshot · 1600×1000px PNG

**MetaTrader 4** · Classic **1:1000**

- ✓ Forex, metals, indices & energies
- ✓ Expert Advisors — automated trading
- ✓ Desktop · Web · Mobile

**MT5 – Desktop terminal**

**MetaTrader 5** · Advanced **1:3000**

- ✓ All MT4 assets + stocks, crypto & synthetic
- ✓ 80+ indicators · 21 timeframes · strategy tester
- ✓ Desktop · Web · Mobile

**COMMON TO BOTH**    OnFin client-cabinet integration    Deposit & withdraw without leaving the platform    Single login · multiple accounts

# An Account for Every Trading Style

Different clients need different doors into the market, and a partner converts more leads by matching the account to the person. OnFin runs five account types across the two platforms. The Mini account opens with a single dollar and no commission, a gentle way to feel live trading. The ECN account is for serious volume, with spreads from zero pips, a flat four-dollar commission per lot, and

leverage to 1:3000. Standard and Fix sit in between, and the Copy account is for investors who would rather follow professionals than trade by hand.

A separate synthetic line is live on MT5, covering the full range of Volatility Indices. These trade around the clock, including weekends and holidays, so a partner has something to offer when the rest of the market is closed.

| ACCOUNT  | PLATFORM  | MIN DEPOSIT | SPREAD        | COMMISSION | MAX LEVERAGE |
|----------|-----------|-------------|---------------|------------|--------------|
| Mini     | MT4       | \$1         | from 2.4 pip  | \$0        | 1:1000       |
| ECN      | MT4 / MT5 | \$50        | from 0.0 pip  | \$4 / lot  | 1:3000       |
| Standard | MT5       | \$100       | from 2.4 pip  | \$0        | 1:3000       |
| Fix      | MT4       | \$50        | fixed 3.0 pip | \$0        | 1:3000       |
| Copy     | MT5       | \$100       | from 2.4 pip  | \$0        | 1:1000       |

## Mini

"Start with \$1. Zero commissions. Feel the market."

## ECN

"Raw spreads. Maximum leverage. Built for serious volume."

## Copy

"Allocate funds. Copy pros. Earn without trading."

### Synthetic Accounts — live on MT5

Full Volatility Index line (V10–V100), available 24/7 incl. weekends & holidays. Crash & Boom + Step — in development.

# 800+ Instruments. One Platform.

Range matters because people trade what they already follow. A client who watches gold, oil, the S&P 500, or Bitcoin should be able to act on that interest without opening accounts elsewhere. OnFin covers more than 800 instruments from one login, across forex, metals, indices, US shares, crypto, and energies.

The newer addition is the synthetic line. Volatility Indices are now live on MT5 and run continuously, including weekends and holidays, when the ordinary markets are shut. They give active traders something to do at any hour, and give a partner a reason to talk to clients outside normal sessions. Crash and Boom and the Step Index are on the way.

## Forex

50+ currency pairs — majors, minors & exotics.

## Metals

XAU/USD, XAG/USD and more.

## Indices

Crash & Boom · Step Index  
· coming soon

# Institutional Liquidity. Retail Access.

Most retail traders never see how their orders are handled, but the informed ones ask, and a partner should have the answer ready. On the ECN model, client orders are passed straight through to outside liquidity providers rather than kept in-house, so the broker is not positioned against the people who trade with it.

The path below is the whole story. Prices come from a tier of banks and prime brokers, are aggregated in OnFin's hub, and reach the client through MT4, MT5, and the cabinet. Execution and margin terms can be tuned for a partner's own client segment.

## 01 · NDD EXECUTION

No conflict of interest

ECN orders are executed straight-through to external liquidity providers — never against the client.

## 02 · INFRASTRUCTURE

Aggregated depth

Multiple LP feeds aggregated into a single, competitive price stream with a real-time risk engine.

## 03 · CUSTOMIZATION

Per-partner terms

Execution and margin conditions can be tailored to partner segments.

Execution routing described factually. Synthetic indices are in-house 24/7 markets, presented separately (slides 8–9), not under this NDD model.

# Conditions Built for Profitability

Trading conditions decide how much of a result a client actually keeps, so this is where a partner builds trust with specifics rather than slogans. The two accounts most clients choose sit side by side here.

The Mini account starts at a single dollar, with spreads from 2.4 pips and no commission, which suits someone still learning. The ECN account is built for volume, with spreads from zero and a flat four-dollar commission per lot. Both use market execution with no requotes. The choice is easy to explain: pay the spread on Mini, or pay the commission on ECN and keep more of every move.

| CONDITION    | MINI ACCOUNT | ECN ACCOUNT  |
|--------------|--------------|--------------|
| Spread       | from 2.4 pip | from 0.0 pip |
| Commission   | \$0          | \$4 / lot    |
| Max leverage | 1:1000       | 1:3000       |
| Min deposit  | \$1          | \$50         |
| Execution    | Market       | Market       |
| Requotes     | ✓ None       | ✓ None       |

“Tight spreads + fast execution = more profit stays with your client.”

# Fast In. Fast Out. No Friction.

Money that moves slowly is one of the fastest ways to lose a client, so funding is treated as part of the product rather than an afterthought. OnFin supports cards, bank transfers, crypto, and a growing list of regional providers, with the local options expanding as the LATAM rollout continues.

Speed is the part clients feel. Crypto deposits land almost instantly and withdrawals are processed quickly. Cards are fast in and take a day or so out. Bank transfers run on the usual banking timelines. There are no hidden fees on either side, so a partner never has to explain a surprise deduction.

|  |   |  |
|--|---|--|
|  <p><b>Banking</b><br/>                 Visa / Mastercard<br/>                 Bank transfer — SEPA / SWIFT</p> |  <p><b>Crypto</b><br/>                 USDT — TRC20 / ERC20<br/>                 BTC · ETH · Binance Pay</p> |  <p><b>Local / Regional</b><br/>                 Regional PSPs · e-wallets<br/>                 Constantly expanding in LATAM</p> |
|--|---|--|

| METHOD        | DEPOSIT  | WITHDRAWAL | FEES           |
|---------------|----------|------------|----------------|
| Crypto        | Instant  | Fast       | No hidden fees |
| Card          | Fast     | 1–3 days   | No hidden fees |
| Bank transfer | 1–3 days | 1–5 days   | No hidden fees |

# Support That Speaks Your Client's Language

Support is where retention is quietly won or lost. A client who cannot get an answer in their own language tends to drift away, and a partner is usually the one who hears about it first. OnFin runs live chat through the cabinet, an email and ticket system, and a personal manager for active clients.

The detail that travels well in this region is language. Service is available in ten languages, Spanish among them, so a LATAM client is not forced into English the moment something goes wrong. For a partner, that is one less reason for a client to leave and one more thing to promise honestly.

|   |  |
|---|--|
| <br><b>Live Chat</b><br>24/5 — real-time help in-cabinet.                | <br><b>Email &amp; Tickets</b><br>support@onfin.io · tracked ticket system. |
| <br><b>Personal Manager</b><br>A dedicated manager for active clients. | <br><b>10 Languages</b><br>Service in your client's own language.         |

## SUPPORT LANGUAGES

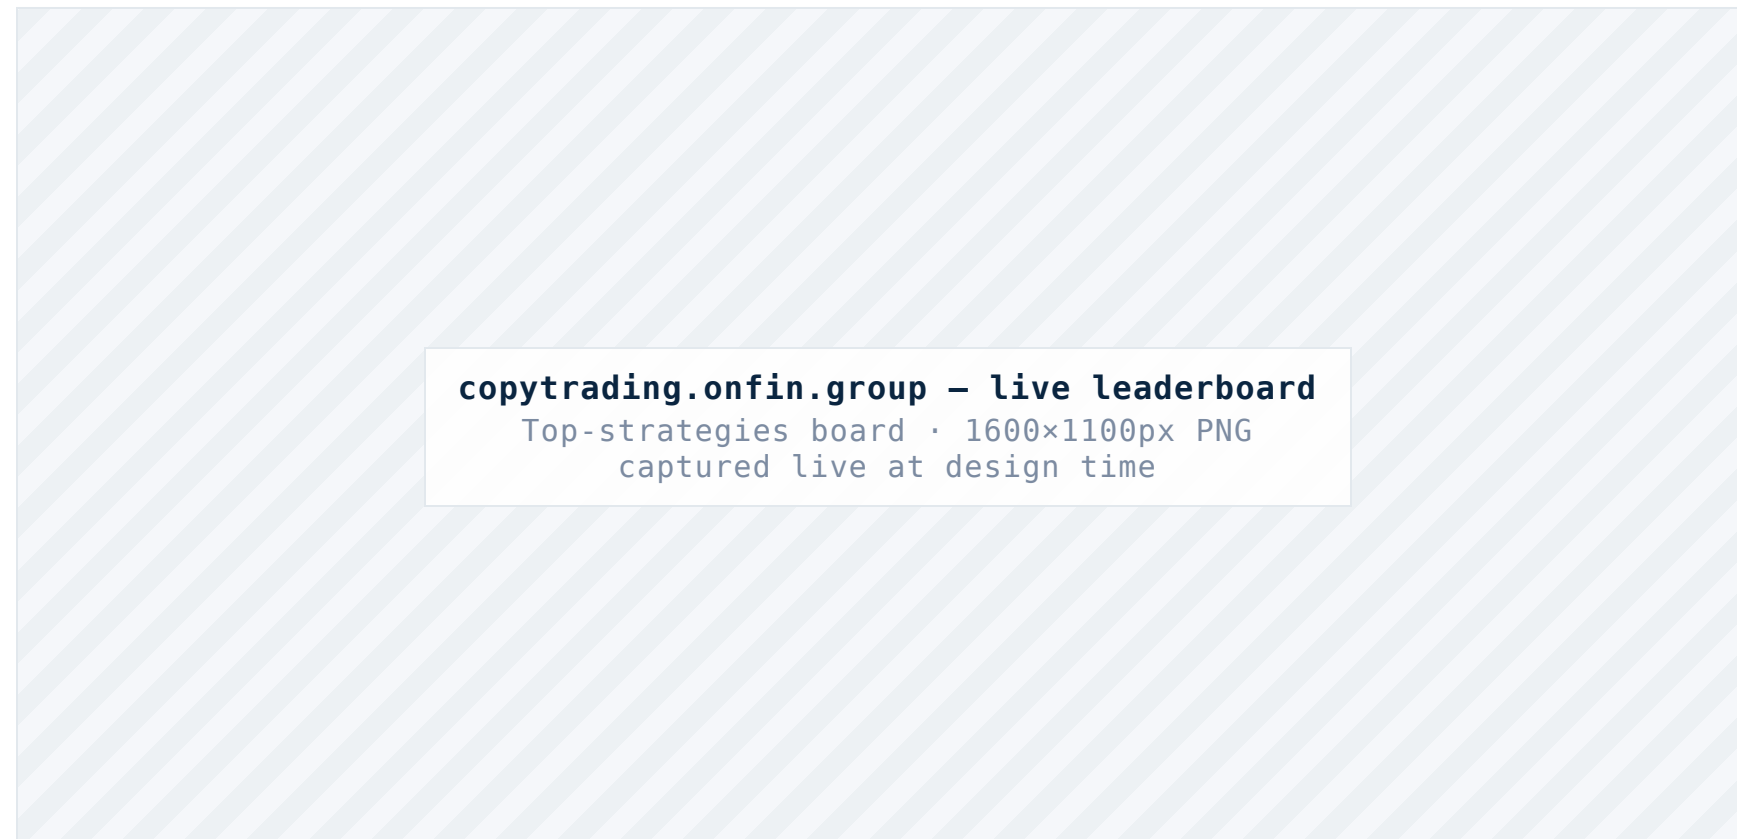

|            |           |         |           |           |
|------------|-----------|---------|-----------|-----------|
| English    | Español   | Русский | ភាសាខ្មែរ | Bahasa    |
| Tiếng Việt | ភាសាខ្មែរ | ភាសា    | Türkçe    | Bahasa MS |

“When your client has a question — we answer. In their language.”

# Invest Without Trading. Profit With Professionals.

Not every client wants to trade. Many would rather put money to work and let someone with a record do the trading, and that audience is large in Latin America. Copy trading is built for them: an investor browses ranked strategies, filters by return, drawdown, style, and term, and follows the ones that fit, keeping the freedom to stop or switch at any time.

The protection that matters sits underneath. The investor's money stays in the investor's own account. A strategy manager places trades that are copied across, but never holds or controls anyone else's funds. For managers, a verified track record and a performance fee turn a good run into a following.

Past results do not guarantee future performance. Figures reflect live platform data as of [capture date].

## FOR INVESTORS

- ✓ 100+ ranked strategies, with annual returns exceeding 300%
- ✓ Filter by return, drawdown, style & term
- ✓ Stop or switch anytime — full control

## FOR STRATEGY MANAGERS

- ✓ Earn up to a 50% performance fee
- ✓ Tamper-proof, verified track record
- ✓ Promotion to new investors

Your capital always stays in **your** account. The manager copies trades, never your funds.

# Trade More. Earn More. From Day One.

Promotions are an entry hook, not the reason a serious client stays, so they work best framed as a head start rather than free money. OnFin's offers are simple, and a partner should present them with the conditions attached.

The Welcome Bonus matches a first deposit, giving a client more to trade with from day one. Copy-trading investors have their own bonus. For Latin America there is a multiplier account that turns a small deposit into a larger trading limit while capping the downside. Exact terms are set with the manager and vary by market, which is worth saying plainly up front.

## Welcome Bonus

**100%**

Deposit \$100 — trade with \$200.

Code WELCOME100, auto-applied. Credited to the Credit field · turnover 3 lots per \$100 · standard drawdown rules apply.

## Copy Trading Bonus

**100%**

A 100% bonus for copy-platform investors.

More capital allocated across ranked strategies, from day one.

## LATAM x12 Multiplier

Buy a \$100 account — trade with \$1,200.

High-leverage upside with maximum risk capped at roughly \$120. A capped-downside hook built for LATAM.

Specific bonus terms confirmed with your manager · current offers at [onfin.io/promotions](https://onfin.io/promotions). Promotional terms may vary by jurisdiction.

# Pass the Challenge. Trade Our Capital.

A two-step evaluation. Pass it and trade a funded account while keeping most of the profit.

For a confident trader with little capital, this changes the conversation. Instead of risking their own money, they prove themselves on the challenge and then trade the company's. A partner can use it to keep ambitious clients who would otherwise leave for a dedicated prop firm.

**80%** **\$100K**

Profit share, up to    Funded account size

## 1 Two-step challenge

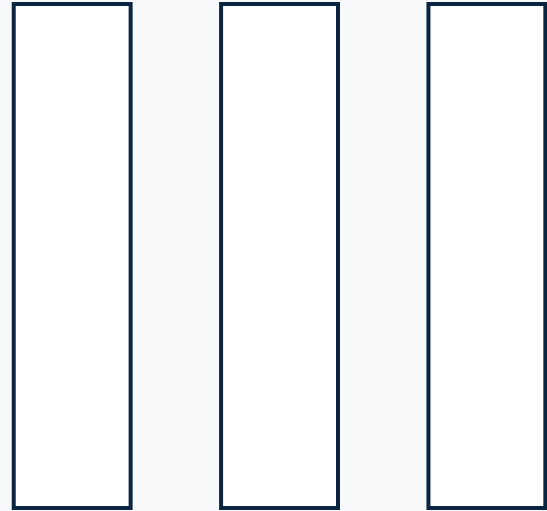

Hit the profit target across two evaluation phases within the risk rules.

## 2 Get funded

Receive a funded account of \$50,000 or \$100,000. Challenge fees: \$500 / \$1,000.

## 3 Trade & earn

Keep up to 80% of the profit you generate.

— PART III · ONBOARDING FLOW

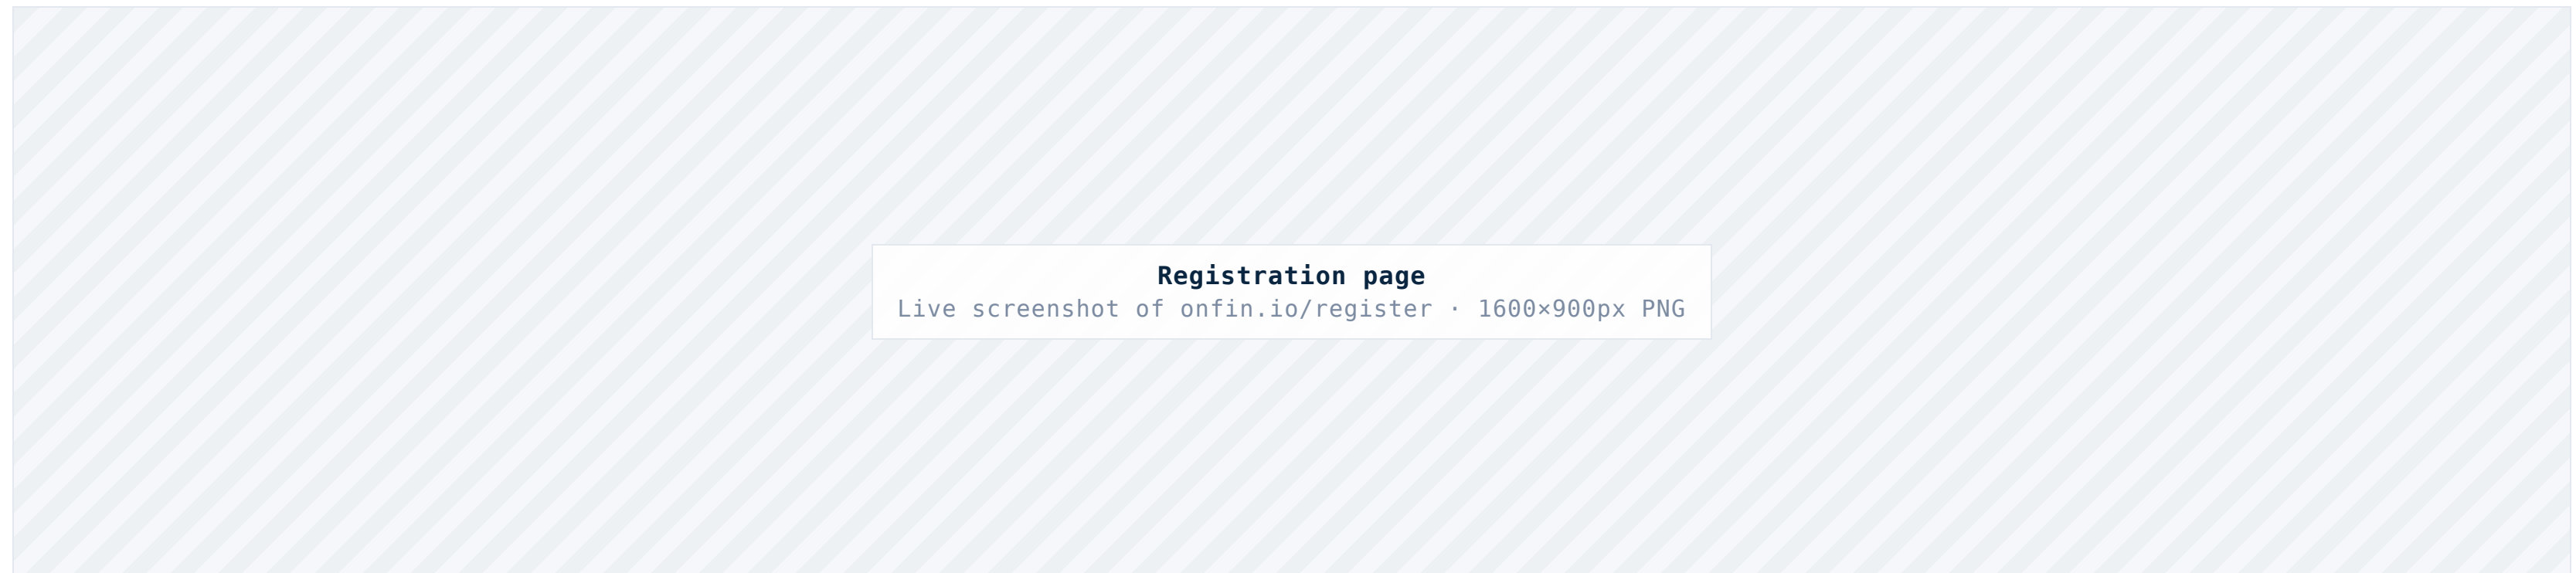

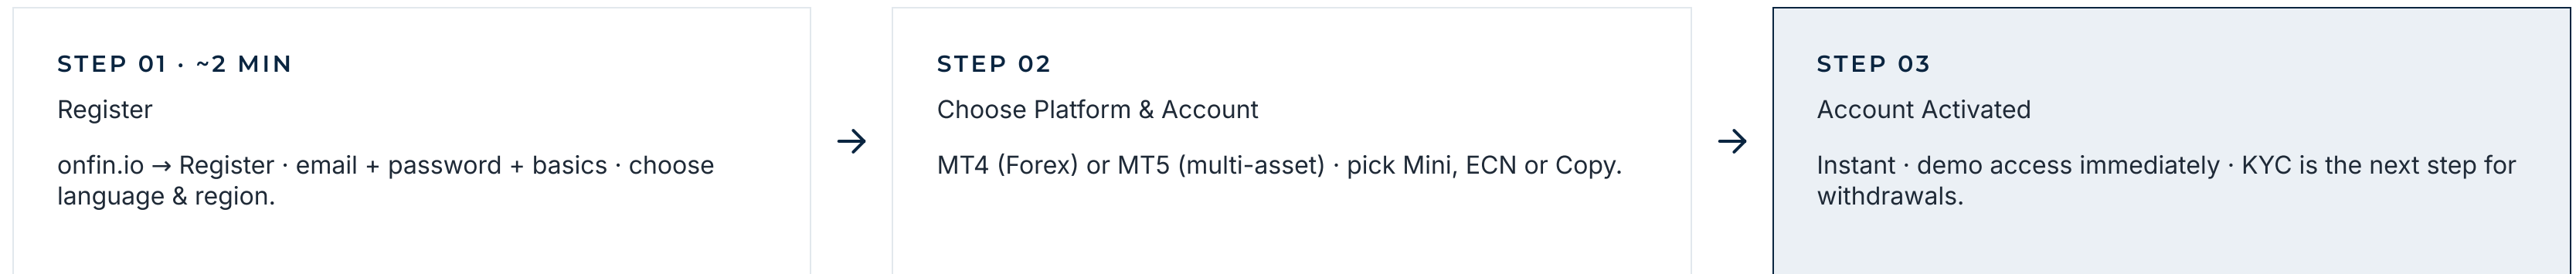

# Getting Started

From registration to first trade, step by step. It is simple, and your client will be done in about ten minutes.

# 3 Steps to Your Trading Account

Registration is where many clients hesitate, usually because they expect it to be long or to ask for too much. It is neither. The point a partner can make with confidence is that a client goes from the website to a working account in a few minutes.

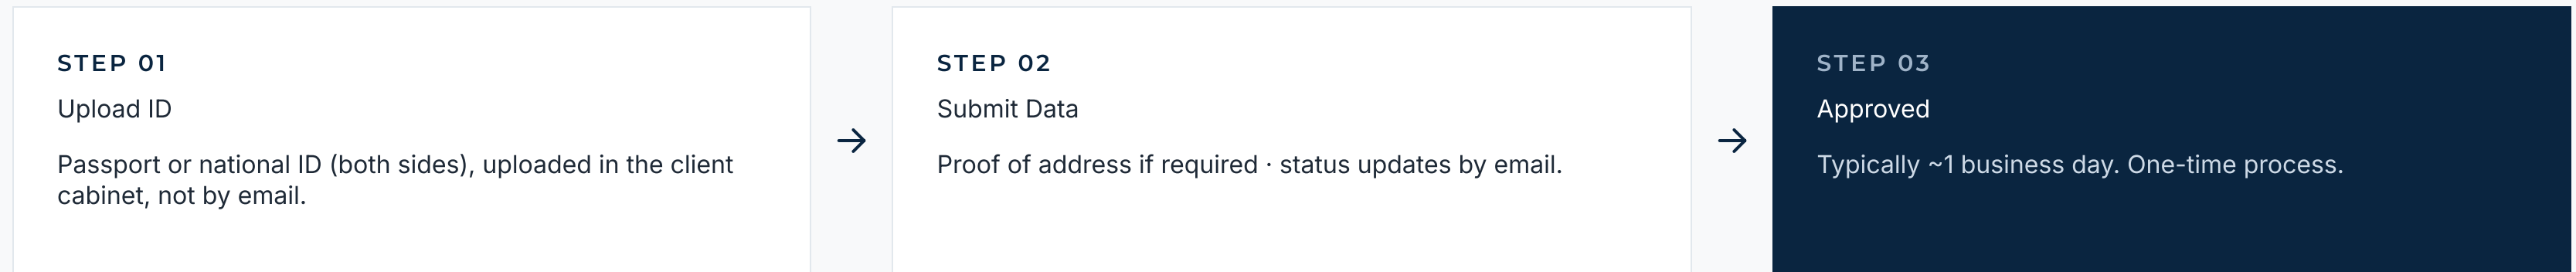

The three steps are register, choose a platform and account, then start. A client signs up with an email and a few basics, picks MT4 or MT5 and the account type that fits, and is active straight away, with demo access immediately and verification needed only when they want to withdraw.

# Verify Once. Trade Forever.

Verification is the step clients dread and partners over-explain, so it helps to frame it as the quick formality it is. A client uploads an ID, adds proof of address if asked, and is usually approved within a business day. It happens once.

The reason to bother is easy to state. Verification unlocks withdrawals and the full account. A client can look around, trade on demo, even fund and trade before finishing it, but clearing it early means nothing stands between them and their money later.

## WHAT YOU NEED

- ✓ Passport or national ID — both sides
- ✓ Proof of address (if requested)

## GOOD TO KNOW

- ✓ Upload happens in the cabinet
- ✓ Verification unlocks withdrawals & full functionality

# Fund Your Account in Minutes

The first deposit is a moment of trust, and anything confusing here costs conversions. OnFin keeps it to four steps: choose a method, enter an amount, confirm, and the funds are credited.

## SPEED

- ✓ Crypto (USDT, BTC) — instant
- ✓ Visa / Mastercard — fast
- ✓ Bank transfer — 1–3 days

Speed depends on the method, and clients should know what to expect. Crypto is effectively instant, cards are quick, and bank transfers follow normal banking time. Minimums are low enough that no one is priced out, starting at a single dollar on Mini. There are no hidden fees, so the amount a client sends is the amount that goes to work.

## MINIMUM DEPOSIT

- Mini · \$1
- ECN · \$50
- Standard · \$100
- Copy · \$100

“No hidden fees. No delays. Your capital — ready to work.”

# Your First Trade. Step by Step.

The first trade is the moment a client stops being a sign-up and becomes a trader, and it is simpler than most expect. The same five steps work the same way on MT4 and MT5.

A client logs in with the details from their welcome email, opens Market Watch to pick an instrument, sets the size along with a stop loss and take profit, and places the order with one button. From there the open-positions view is where they manage the trade. A partner can walk a new client through all of it in a single sitting.

## 01 Login

Use the credentials from your registration email.

## 02 Select Instrument

Open Market Watch and choose your pair.

## 03 Set Parameters

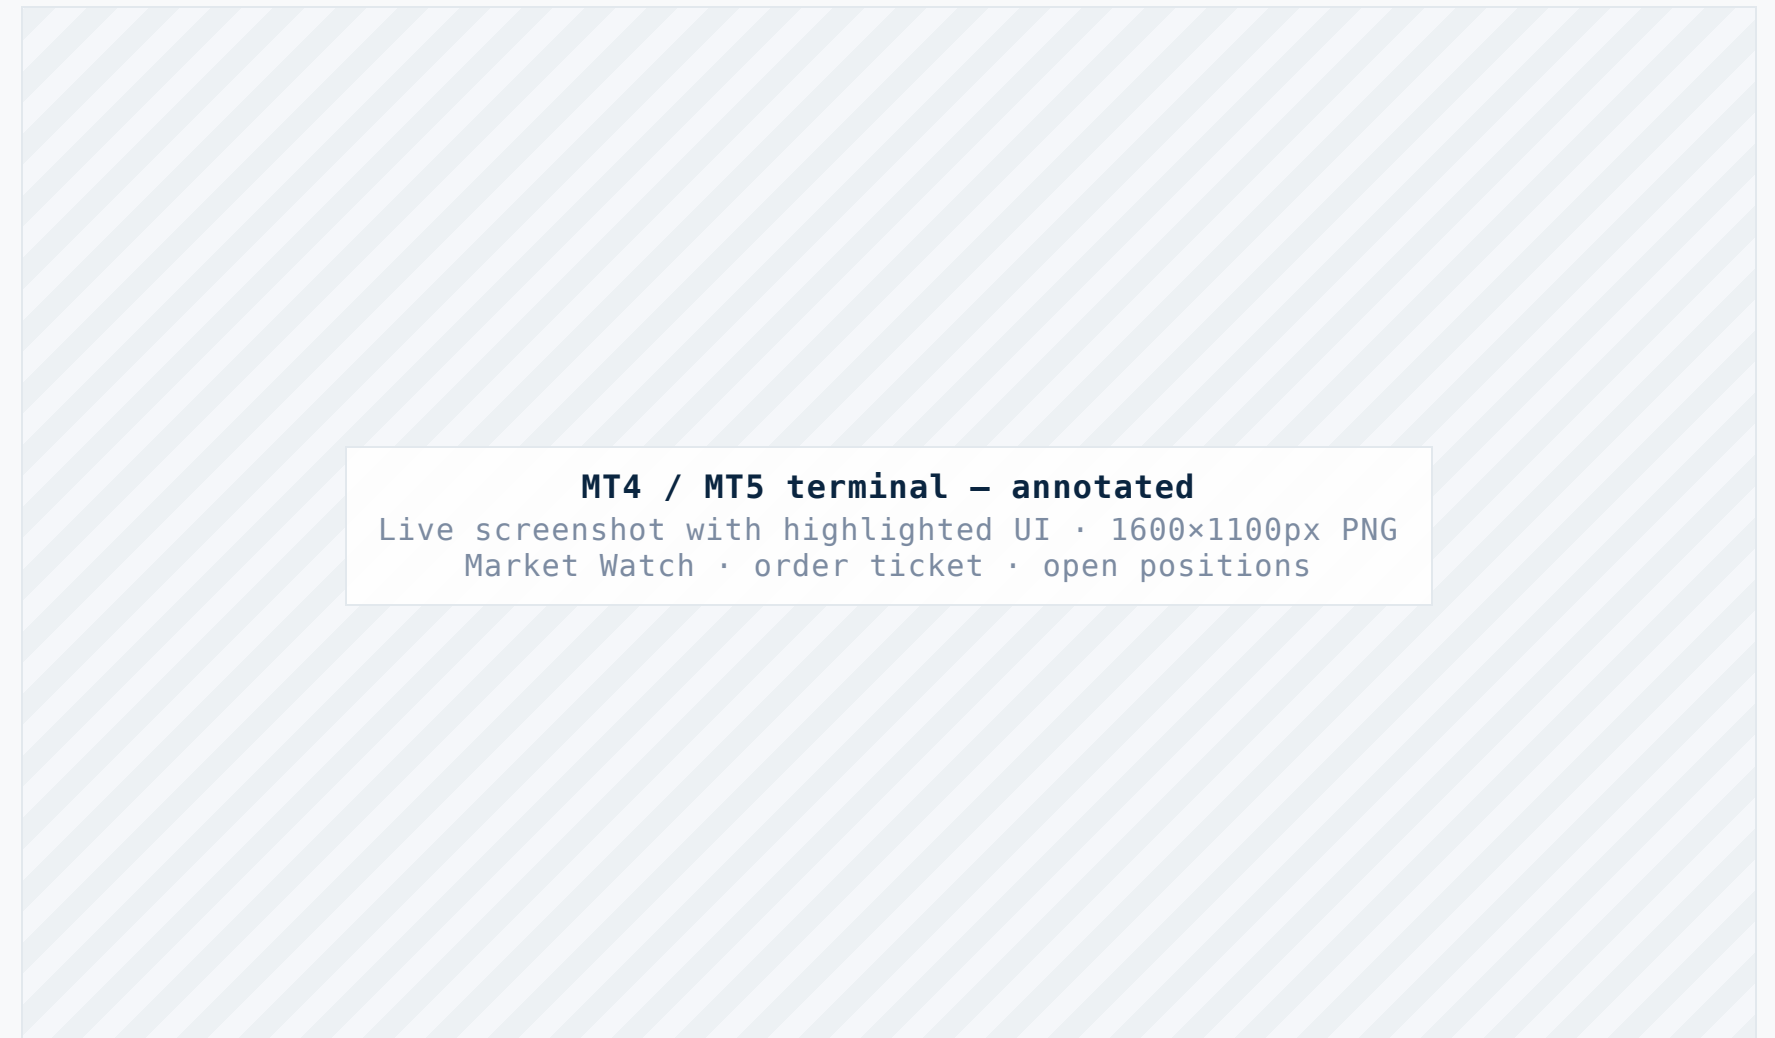

Volume (lots), Stop Loss, Take Profit.

## 04 Execute

Buy or Sell, with instant market execution.

## 05 Monitor

Manage open positions in real time.

# Not Ready for Real Money?

# \$10,000

virtual capital

- ✓ Full real-account functionality
- ✓ Live quotes from the real market, no simulation
- ✓ Stays active while you trade

For a curious but cautious client, the demo removes the last excuse. It behaves exactly like a real account on live prices, so nothing has to be relearned later. For a partner it is the easiest possible first ask: not money, just a look. When the client is ready, switching to real is one click and the setup carries over.

## WHO IT'S FOR

### Beginners

Learn risk-free.

### Experienced

Test strategies.

### Partners

Demo the live platform to clients, no risk, real data.

## Open a Demo

One click in the cabinet — switch to real anytime, data preserved.

[onfin.io/register](https://onfin.io/register)

# Why Traders Choose OnFin

This is the page a partner leaves open at the end. None of it is new by now. It is the whole case in one view. OnFin pairs a decade of operating history with conflict-free execution, real institutional pricing, deep market access, fast payments, copy trading, and support in the client's language. Read together, the point is not any single feature. It is that a client who joins through a partner lands somewhere built to keep them trading, which is the outcome that pays a partner over time.

## 10 Years of Trust

Established 2015 · stable, proven infrastructure.

## NDD / ECN Execution

No conflict of interest, orders go to market.

## Spreads from 0 pip

Real institutional pricing on ECN accounts.

## Leverage up to 1:3000

Maximum flexibility for active traders.

## 800+ Instruments

Forex, stocks, crypto, metals & synthetic 24/7.

## Fast Payments

Crypto instant · cards · local PSPs.

## Copy Trading

100+ ranked, verified strategies · stop anytime.

## Multilingual Support

10 languages · personal manager available.
